

Hybrid Deergrass *Trichophorum* × *foersteri*

Has BOTH the 'holes' AND the sub-stomatal pits!

****LIKE *T. cespitosum*,**** has obvious sub-stomatal pits (but smaller - see right)

Sub-stomatal pits up to ***18 μm*** deep (i.e. radially)

(Vascular bundles)

****LIKE *T. germanicum*****, green tissue has patches of clear cells in cross-section, BUT these may be reduced or even lacking in some sections
